

Manage SWBC Loss Mitigation through the Akcelerant Framework

CONNECT.SWBC LOSS MITIGATION delivers a unique suite of insurance and collection services within the Akcelerant Framework, including service requests for asset recovery, repossession, remarketing, and legal, as well as submission and tracking of collateral protection claims.

The Framework's SWBC Loss Mitigation screen provides a summary of information regarding loss mitigation case history, service details, outstanding alerts, and recent actions.

KEY FEATURES

The key features of CONNECT.SWBC LOSS MITIGATION provide the tools to consign, track, communicate and resolve the entire asset recovery and disposal process. Utilizing a nationwide partnership network of over 500 repossession agents, 200 attorneys and 250 auction facilities allows you to quickly and accurately repossess, request legal and skip services, process SWBC collateral protection claims, recondition and remarket your secured collateral.

- **Easily Initiate and Track Requests for Loss Mitigation Services**
Account-level screens designed specifically to monitor loss mitigation service requests allow for the creation, tracking, and management of these requests within the Framework.
- **Real-time View of Loss Mitigation Information**
Information regarding your loss mitigation service requests are received in real-time, allowing you to make more informed decisions. As updated information is processed, all comments, attachments, notes, claims status, etc. are housed within the Notes section of the connector as well as the workflow history, giving you a complete and up-to-date view of all the work being performed on the account.

- **Never Miss a Step**

As your service request progresses, alerts are automatically displayed on the SWBC Loss Mitigation Dashboard, prompting your staff to take action. A pre-defined business strategy is utilized in moving the service request from legal to repossession, to claim payment, to remarketing. In addition, whenever an update takes place, the user is sent an email, notifying them of the change in the service request.

BENEFITS

Users benefit from the connector's ability to streamline the loss mitigation process.

- **Simplify Processes and Communication**

Create a routine audit trail, eliminating errors, reducing compliance exposure and streamlining your communication.

- **Eliminate the Need for Multiple Programs**

Eliminate time spent maneuvering between multiple screens and programs. All the necessary tools to initiate and track SWBC loss mitigation service requests can be found in the Framework.

- **Stay One Step Ahead**

All loss mitigation information is displayed in real-time, eliminating errors made due to inaccurate or out-dated information. In addition, standardized workflows ensure the collection process is done exactly as you have defined every time.

- **Maximize Your Resources**

Maximize your return and reduce deficiency balances through the assistance of SWBC's network of loss mitigation professionals.

SYSTEM REQUIREMENTS

Akcelerant Framework Release 9.02 or higher must be running in order to utilize CONNNECT.SWBC LOSS MITIGATION.
